## **Mohawk Receives New 45 Minute Particle Core Approvals**

Mohawk is pleased to announce the newest addition to our family of architectural products – **45 minute Particle Core**. Similar to traditional particle core doors commonly used in the industry, Mohawk's new 45 minute approvals allow us the opportunity to provide customers with alternative solutions when applicable.

Mohawk will be utilizing this construction method when appropriate. Please note that our quotations, acknowledgements and invoices will identify this product in the line item description as "**PC-EB 45min**" - (Particle Core – Edgebonded 45minute fire rated). All doors will be labeled with a Warnock Hersey International tag.

Special attention should be given to the benefits of not requiring any blocking for surface mounted hardware while maintaining Mohawk's standard lifetime warranty. The core is more resilient than mineral core and should be a better core for high use/high abuse applications of 45 min fire label doors

For further information call Mohawk Customer Service.
